

SYRIS V900

Enjoy The Benchmark In Polarized Light

The Syris® v900L visualization system utilizes a proprietary high-performance white-light LED and hybrid polarization technology to eliminate surface glare on the patient's skin, allowing for clearer visualization of sub-surface details. The v900L is ideally suited for:

- Vascular laser treatments
- Surgical excisions & biopsies
- Sclerotherapy
- Hair-removal/grafting/transplantation
- Botox or filler treatments
- Tattoo removal
